SUBMISSION AND/OR APPROVAL OF A DRUG PRIOR AUTHORIZATION REQUEST DOES NOT GUARANTEE MEDICAID PAYMENT FOR PHARMACY PRODUCTS OR THE AMOUNT OF PAYMENT. ELIGIBILITY FOR AND PAYMENT OF MEDICAID SERVICES ARE SUBJECT TO ALL TERMS AND CONDITIONS AND LIMITATIONS OF THE MEDICAID PROGRAM. Confidentiality Notice: This communication, including any attachments, is for the sole use of the intended recipient(s) and may contain confidential and privileged information. Any unauthorized review, use, disclosure or distribution is prohibited. If you are not the intended recipient, please contact the sender by reply telephone (1-877-537-0722) or fax (1-877-537-0720) and destroy all copies of the original message. 6/21/2019

Prior Authorization Criteria

Recombinant Human Growth Hormone Prior Authorization Criteria

Recombinant human growth hormone (somatropin) is a protein designed to mimic naturally occurring growth hormone. Somatropin promotes tissue and linear growth along with stimulating the metabolism of carbohydrates, lipids, and minerals. Somatropin is a subcutaneous injection routinely administered daily and is used to treat short stature due to growth hormone deficiency, Turner syndrome, Noonan syndrome, Prader-Willi syndrome, short stature homeobox-containing gene (SHOX) deficiency, chronic renal insufficiency, idiopathic short stature, and children small for gestational age.

Diagnosis:

ICD-10 code(s):

Initial authorization: 12 months

ADULTS

Patient age is 18 years or older AND Prescriber is, or has consulted with an endocrinologist or nephrologist AND Documented diagnosis of one or more of the following:

- o Craniopharyngioma
- o Panhypopituitarism
- Prader-Willi Syndrome
- o Turner Syndrome
- Other approvable indication

OR

Documented procedure of cranial irradiation

CHILDREN

Patient age is 17 years or younger

AND

Prescriber is, or has consulted with a pediatric endocrinologist or pediatric nephrologist (renal disease) AND

Documented diagnosis of one or more of the following:

- Iatrogenic growth hormone deficiency
- Small for gestational age
- Growth failure associated with renal insufficiency or chronic kidney disease
- o Turner syndrome
- Prader-Willi syndrome

- o Noonan syndrome
- Short stature homeobox (SHOX) gene deficiency
- Blind loop syndrome
- Short bowel syndrome
- HIV-associated cachexia (or wasting)

OR

Diagnosis of growth hormone deficiency, as confirmed by the following:

- Patient's height is more than 2.0 SD below average for the population mean height for age and sex <u>and</u> height velocity measured over 1 year to be 1.0 SD below the mean for chronological age <u>or</u> for children over 2 years of age, a decrease in height SD of more than 0.5 over 1 year ¹ AND
- Other causes of poor growth have been ruled out, including hypothyroidism, chronic illness, malnutrition, malabsorption, and genetic syndrome AND
- Growth hormone response of less than 10 ng/ml to at least two provocative stimuli of growth hormone release (clonidine, glucagon, insulin, levodopa, L-Arginine, GNRH, etc.) OR

Idiopathic short stature (All above causes have been ruled out):

- 1. Height more than 2.25 SD below average for the population mean height for age and sex ¹ OR
- Projected height (as determined by extrapolating pre-treatment growth trajectory along current channel to 18-20 year mark) is > 1.5 SD below mid-parental height utilizing age and gender growth charts related to height ²
 - OR
- 3. A decrease in height SD of more than 0.5 over one year in children over 2 years of age ¹ OR
- 4. Height velocity more than 2 SD below the mean over one year or more than 1.5 SD sustained over 2 years ¹

Reauthorization: 12 months Adults (age 18 years or older):

Patient continues to meet criteria for initial approval

Children (age 17 years or younger):

- 1. Patient continues to meet criteria for initial approval AND
- 2. Prescriber must provide documentation of:
 - Improvement of height deficit relative to mean for age OR
 - o Improvement of height velocity relative to mean
- Based on Set 1: Clinical charts with 5th and 95th percentiles. Length/Stature-for-age percentiles. Developed by the National Center for Health Statistics in collaboration with the National Center for Chronic Disease Prevention and Health Promotion <u>http://www.cdc.gov/growthcharts</u>
- Midparental height formulas Boys: [father's height in cm + (mother's height in cm +13 cm)]/2 Girls: [(father's height in cm - 13 cm) + mother's height in cm]/2 NOTE: For midparental height calculation in inches, 1 in = 2.5 cm.
